

Abstract

The invention is based on an electric power tool,  
5 having an electric motor located in a housing (10) and having  
a cooling device (16, 18, 20, 30, 32).

It is proposed that the cooling device (16, 18, 20, 30,  
32), at least in some regions, has a cooling conduit (30)  
10 that is closed off from an interior of the housing (10).
